frontend worked on
Darec McDaniel authored 3 days ago

Step 4.2: Authentication Components
Darec McDaniel authored 3 days ago

> •   Create Login and Register components
> •   Implement AuthService for API calls
> •   Add JWT token storage and management
> •   Create protected route wrapper component
> •   Implement logout functionality
> Step 4.3: Core UI Components
> •   Create Dashboard component with summary cards

```
•        Build EmployeeList component with search and pagination
•        Create EmployeeForm for add/edit operations
•        Implement DepartmentList and DepartmentForm components
•        Add navigation component with role-based menu items
Step 4.4: Advanced UI Features
•        Create AdvancedSearch component with multiple filters
•        Build ReportGenerator component with export options
•        Implement PerformanceReview components
•        Add charts and visualizations to dashboard
•        Create responsive design with mobile support
```

• Create PerformanceReviewController and service
Darec McDaniel authored 3 days ago

```
•        Implement review CRUD operations
•        Add business logic for review periods and ratings
•        Create endpoints for employee review history
•        Implement manager-employee review permissions

•        Add Apache PDFBox dependency for PDF generation
•        Create ReportController and ReportService
•        Implement employee roster report generation
•        Add salary analysis report with charts
•        Create performance summary reports
•        Add timestamp and title to all reports
```

• Add validation error response handling
Darec McDaniel authored 3 days ago

• Add search methods to repositories using @query
Darec McDaniel authored 3 days ago

```
•        Create SearchController with basic search endpoints
•        Implement search by name, department, employee ID
Add pagination support with Pageable parameters
```

• Configure Spring Security with JWT
Darec McDaniel authored 3 days ago

```
•        Create AuthController with login/register endpoints
•        Implement JwtUtil class for token generation/validation
•        Create UserDetailsService implementation
•        Set up password encoding with BCrypt
•        Create EmployeeController with REST endpoints
•        Implement EmployeeService with business logic
•        Add endpoints: GET /employees, POST /employees, PUT /employees/{id}, DELETE /employees/{id}
•        Implement validation annotations on Employee entity
•        Add exception handling with @ControllerAdvice
```

• Create base User abstract class with common fields
Darec McDaniel authored 3 days ago

```
•        Implement Employee, Manager, Admin classes extending User
•        Create Department, PerformanceReview, Project entities
•        Add JPA annotations (@entity, @table, @id, @GeneratedValue, relationships)
•        Implement interfaces (Reviewable, Reportable, Searchable)
```

@Column annotations added
Darec McDaniel authored 4 days ago

Jul 11, 2025

switched to H2 database for simplicity
Darec McDaniel authored 4 days ago

```
removed @table annotations from extended classes
```

• Create base User abstract class with common fields

Darec McDaniel authored 4 days ago

> •   Implement Employee, Manager, Admin classes extending User
> •   Create Department, PerformanceReview, Project entities
